

# SIDI MOHAMED SAWADOGO

UNIVERSITÉ DE MONTRÉAL  
Department of Economics

## Contact Information

Email: [sidi.mohamed.sawadogo@umontreal.ca](mailto:sidi.mohamed.sawadogo@umontreal.ca)

Phone: +1 514 804 8299

Homepage: [sidi-sawadogo.github.io](https://sidi-sawadogo.github.io)

Citizenship: Canadian and Burkinabè

U.S. work eligibility: Eligible to seek TN status for qualifying economist positions under USMCA

## Education

2021–27 **Université de Montréal**, Canada

Ph.D. in Economics, expected 2027

2016–19 **École Nationale de la Statistique et de l'Analyse Économique (ENSAE)**, Senegal

M.Sc. in Statistics and Economics, *Ingénieur Statisticien Économiste*, with distinction

2013–16 **Université Nazi Boni (ex. Université Polytechnique de Bobo)**, Burkina Faso

B.Sc. in Mathematics, with distinction

## Fields

Primary Industrial Organization, Econometrics

Secondary Applied Microeconomics, Public Economics

## References

## Job Market Paper

**“Build or Subsidize? The Welfare Effects of Deployment and Affordability Subsidies in U.S. Broadband”**

***Sole-authored. Finalist, 2025 Bank of Canada Graduate Student Paper Award.***

Counterfactual simulation of market outcomes under alternative subsidy regimes. ACP and BEAD subsidies are *complements, not substitutes*: ACP cut prices 7–10% in served, low-income markets; BEAD relaxed entry constraints in unserved markets, delivering about \$26 in welfare per subsidy dollar (range: \$25.9–\$27.4) versus near break-even for ACP. Structural model of broadband demand, pricing, and entry (170,419 products, 66,454 census tracts); entry costs bounded via a moment-inequality estimator. Build where deployment is uneconomic; subsidize affordability where price still binds. [\[Paper\]](#) [\[Replication guide\]](#)

## Working Papers

**“Efficient and Debiased Estimation of Dynamic Discrete Choice Models”**

***Sole-authored.*** Neyman-orthogonal, debiased estimators for dynamic discrete choice models that remain  $\sqrt{n}$ -consistent and asymptotically normal under machine-learning first-stage estimates. *Applications: dynamic pricing, market entry, and merger simulation.* [\[SSRN\]](#)

**“Target-Population Fragility in Judge IV under Average Monotonicity”** with Mohamed Coulibaly

Average-monotonicity assumptions in judge-IV designs leave the implied target population fragile, so the estimated effects lack a stable interpretation. *Applications: causal inference for regulatory and litigation settings.* [\[Paper\]](#) [\[Appendix\]](#)

## *Selected Works in Progress*

**“Selection on Structural Errors in Moment-Inequality Estimation of Discrete Games”**

with Mohamed Coulibaly

**“Fintech Entry and Agent Selection in Mobile Money Markets: Evidence from Senegal”**

## **Fellowships, Grants, and Awards**
